# PK PAINTSTIK®

## MARKER

**NEW**

**Makes Marks on Very Hot Steel Coils and Sheets  
That Remove Completely in Any Standard Acid Pickling Bath**

#### FEATURES:

- Marks are removed completely in any standard acid pickling bath
- Bright white paint in stick form
- Marks on hot steel coils
- Marking temperature range: 800°F to 1200°F (427°C to 649°C)
- Marks will not run, char, or discolor
- No ghosting image on the metal surface
- Size: 3/8" x 4-5/8"

#### BENEFITS:

- Saves the expense of cutting off marks not removed in the pickling bath when using permanent paint markers
- Will not contaminate the steel surface for future processing operations including galvanizing or other plating operations
- Allows full use of the entire coil

This revolutionary new paint marker addresses the unique problems associated with marking on hot steel and then removing the marks in acid pickling baths before the steel is galvanized or plated. The PK Paintstik goes on smoothly and dries instantly without discoloring or charring on metal surfaces at temperatures between 800°F and 1200°F. Marking outside the recommended temperature range may result in marks that remain on the surface after passing through the pickling bath. We recommend test marking for each application to ensure marks are completely removed in the acid pickling bath solution.

This marker is designed to be removed in a wide variety of acid solutions including Hydrochloric and Sulfuric Acids in water. After the proper acid baths and water rinses, the marks will be completely removed and no ghosting left on the metal surface. The PK Paintstik is designed to be used with our #100 wooden holder, or our #111 metal holder.

#### ORDERING INFORMATION

| Part No. | Color | Case Qty. | Case Wt. |
|----------|-------|-----------|----------|
| 81200    | White | 144       | 9 lb.    |
